Steve's summertime talk

Presented by
Steve Wilson

Thursday 11 September 2025

Venue: A Transport for London building, to be advised

Commencing at 5:30pm BST

Talk synopsis

The Society's Annual General Meeting will be followed by a talk on the Evolution of the European Train Control System (ETCS). The Digital Railway initiative is undertaking the deployment of the European Rail Traffic Management System across the UK network in the coming decades. Since the start of the Cambrian project in 2006, the industry has made great steps in refining ETCS technology and understanding its deployment. In this presentation, Chris Winter, Technical Lead for ETCS at SNC Lavalin, will discuss how ETCS technology and experience has advanced since the UK's initial deployment, and how projects around the world are working to capitalise on these developments.

Speaker biography

Prior to his retirement Steve was Reliability, Availability, Maintainability and Safety (RAMS) engineer on the Deep Tube Programme.
